

# Control your energy usage with RadioRA® 2 from Lutron

The energy-saving benefits of a RadioRA 2 system go beyond simply dimming or switching the lights. The system makes it easy to manage your home's lighting to maximize savings.

dimming the lights	saves you electricity	makes bulbs last longer
10%	10%	2 x longer
25%	20%	4 x longer
50%	40%	20 x longer
75%	60%	> 20 x longer

When you dim traditional light sources such as incandescent, halogen, low-voltage, and LED you automatically save energy.

Electronically controlled shades keep HVAC costs down by blocking heat in the summer and insulating windows in winter.

Radio Powr Savr™ occupancy/vacancy sensors are ideal for rooms where lights are often inadvertently left on, such as bathrooms or a child's room.

An "All Off" button on a tabletop keypad lets you turn off lights throughout the house from anywhere in the home.

Program the timeclock to automatically turn off lights when they're not needed, such as exterior lights at sunrise.
